Title: Orofacial Muscle Training During the Provisional Restoration Therapy

Short text:

This new implant rehabilitation series considers the patient's longevity and overall physical health, rather than just esthetics, to provide a completely new approach to patient consultation and implant therapy. The authors treatment plan with consideration for the deterioration of orofacial muscles and explain methods for recovering function and rehabilitating the patient's entire expression. The authors bring a decade of research on how to recover the patient's lost function with implant placement and immediate loading. Treatments performed using the orofacial muscle training described in this book will lead to marked improvements in patient function. Orofacial muscle training during immediate loading with an implant-supported provisional restoration will improve facial appearance as well as the function of the facial expression and masticatory muscles. Treating not only the dental issues but also the patient's posture and muscles of facial expression improves the outcome of treatment dramatically. Filled with cases of orofacial muscle training collected by the International Society of Osseointegration (ISO) and the Japanese Academy for International Dentistry (JAID), this book is the clinician's guide to creating treatment goals together with patients.

Contents

Chapter 1. Implant Treatment Prolongs Healthy Life Expectancy
Chapter 2. Facial Profile Analysis, Classification, and Profile Type
Chapter 3. Orofacial Muscle Training during the Provisional Restoration Phase
Chapter 4. Function of Orofacial Muscles for Rehabilitation
Chapter 5. Fabrication of the Provisional Restoration and Transition to the Definitive Prosthesis

Categories: Functional Therapy, Implantology
