Buch-Information

Hrsg.: Baba, Nadim Z.

Titel: Contemporary Restoration of Endodontically Treated Teeth

Untertitel: Evidence-Based Diagnosis and Treatment Planning

Kurztext:

Written by a group of renowned experts three decades after the publication of the last comprehensive book on this topic, this much-needed book has a wealth of evidence-based information on all facets of the restoration of pulpless teeth. With a better understanding of the factors that can influence the prognosis of severely compromised teeth, the approach to treating these teeth has evolved, and this text offers a well-balanced, contemporary approach to treatment planning. Traditional principles and techniques are reviewed and reinforced, along with modern materials and methods, all with a firm foundation in the best available scientific evidence and with an emphasis on clinical studies. Many of the chapters provide comprehensive, step-by-step descriptions of technical procedures with accompanying illustrations to guide the reader through every stage of restoring pulpless teeth, including fabrication of various foundation restorations, cementation techniques, and methods of provisionalization. Preprosthetic adjunctive procedures, such as surgical crown lengthening, repair of perforations, and orthodontic measures, are also described and illustrated. For years to come, this text will remain a definitive reference for specialists involved in the restoration of pulpless teeth or engaged in planning treatment for structurally compromised teeth.

Contents

Part I. Treatment Planning for Endodontically Treated Teeth

Chapter 01. Impact of Outcomes Data on Diagnosis and Treatment Planning

Chapter 02. Treatment Planning Considerations

Chapter 03. Treatment Options and Materials

Part II. Methods of Restoration for Endodontically Treated Teeth

Chapter 04. Principles for Restoration

Chapter 05. Cementation of Posts and Provisional Restoration

Chapter 06. Tooth Whitening and Management of Discolored Endodontically Treated Teeth

Part III. Management of Severely Damaged Endodontically Treated Teeth

Chapter 07. Crown Lengthening

Chapter 08. Preprosthetic Orthodontic Tooth Eruption

Chapter 09. Intra-alveolar Transplantation

Chapter 10. Autotransplantation and Replantation

Chapter 11. Osseointegrated Dental Implants

Part IV. Treatment of Complications and Failures

Chapter 12. Repair of Perforations

Chapter 13. Removal of Posts

Chapter 14. Removal of Broken Instruments from the Root Canal System

Chapter 15. Endodontic Treatment of a Tooth with a Prosthetic Crown

Chapter 16. Retrofitting a Post to an Existing Crown
