## Buch-Information

**Hrsg.:** Sattler, Gerhard  
**Titel:** Illustrated Atlas of Esthetic Mesotherapy  
**Untertitel:** Active Substances | Dosage | Administration  
**Reihe:** Aesthetic Methods for Skin Rejuvenation  
**Kurztext:**

Mesotherapy is a simple and effective method of esthetic treatment involving targeted microinjections of medicinal substances into the skin and connective tissues. This atlas offers an essential introduction to the practice of esthetic mesotherapy and arms clinicians with what they need to know to get started, such as descriptions of the active substances, injection techniques, side effects, and effective methods for consultation and case documentation. Treatment sequencing is detailed for the most common therapeutic applications, including skin rejuvenation (mesolift), preventive skin toning (mesoglow), treatment combined with injections of botulinum toxin (mesobotox), hair loss treatment (mesohair), cellulite treatment, treatment of local fat pads (lypolysis), and other dermatological indications. The clinical illustrations provide detailed step-by-step instruction, and the inclusion of case histories confirms the benefits and efficacy of this esthetic therapy.

**Contents**

- Chapter 01. Definition of Mesotherapy
- Chapter 02. The Active Substances
- Chapter 03. Documentation and Organization
- Chapter 04. Side Effects
- Chapter 05. Materials and Techniques
- Chapter 06. The Consultation
- Chapter 07. The Treatment
- Chapter 08. Regional Treatments
- Chapter 09. Case Histories
- Chapter 10. Aids for Therapist

**Fachgebiet(e):** Dermatologie
