## Buch-Information

**Autoren:** Mitsuhiro Tsukiboshi

**Titel:** Treatment Planning for Traumatized Teeth

**Kurztext:**

Since the publication of the first edition of this book, increased knowledge of treatment outcomes combined with better techniques, new materials, and innovative technology have led to improved diagnosis and management of dental traumatic injuries. This new edition emphasizes a minimally invasive approach to treating dental traumas in which procedures are aimed at assisting the natural healing process of the dental hard tissues, pulp, periodontal ligament, and alveolar bone; where possible, invasive restoration, pulpectomy, and extraction are avoided. As in the previous edition, key points related to examination and diagnosis, treatment planning, and treatment procedures are described for specific types of dental trauma, and long-term follow-up is encouraged. New cases and updated protocols elucidate the most recent approaches to effective treatment of dental traumatic injuries, and the use of dental cone beam computed tomography, which has dramatically improved diagnosis for traumatized teeth, is emphasized throughout.

**Contents**

Chapter 01. Anatomical Considerations and Classification of Dental Trauma  
Chapter 02. Examination and Diagnosis of Traumatic Dental Injuries  
Chapter 03. Crown Fracture  
Chapter 04. Crown-Root Fracture  
Chapter 05. Root Fracture  
Chapter 06. Subluxation  
Chapter 07. Extrusive Luxation  
Chapter 08. Lateral Luxation  
Chapter 09. Intrusive Luxation  
Chapter 10. Transient Apical Breakdown  
Chapter 11. Avulsion  
Chapter 12. Trauma to the Primary Dentition  
Chapter 13. Trauma to the Supporting Structures

**Fachgebiet(e):** Endodontie, Fachübergreifend, Kinderzahnheilkunde, Restaurative Zahnheilkunde, Zahnheilkunde allgemein
