Book information

Authors: Stefan Wolfart
Title: Implantatprothetik
Subtitle: Implant Prosthodontics: A patient-oriented concept: Planning | Treatment procedures | Evaluation | Esthetics | Function | Digital technologies | Dental technology

Short text:

This comprehensive, systematic handbook for implant prosthetic restorations has been completely revised in its second edition and is supplemented with digital workflows, all-ceramic materials, concepts for the esthetic zone, and clear handling recommendations for patients undergoing anti-resorptive therapy. Immediate restoration of the edentulous jaw, effective treatment strategies for peri-implantitis therapy, and long-term data regarding success rates are also discussed. With more than 3,000 illustrations and a large number of decision trees, the book presents a conclusive, evidence-based concept for prosthetically guided implantation and individual treatment – systematically structured from initial planning to postoperative rehabilitation – with a focus on the optimal prosthetic treatment for the individual patient. The decisive interfaces between implantology and prosthetics, and prosthetics and dental technology, as well as between the patient and dental team are explained in detail. Anyone who wants to work in a patient-oriented way in implantology and implant prosthetics should read this book!

Contents

Part A. Basics
 Chapter 01. Introduction
 Chapter 02. Patient profile
 Chapter 03. Esthetic profile
 Chapter 04. Denture profile
 Chapter 05. Implant abutment profile
 Chapter 06. Biomaterial profile
 Chapter 07. Timing of implant placement and loading protocols in implant dentistry
 Chapter 08. Emergence profile

Part B. Treatment concept and planning
 Chapter 09. Treatment concept
 Chapter 10. Individualized best form of treatment using decision trees

Part C. Clinical procedures
 Chapter 11. Radiographic analysis and drilling templates
 Chapter 12. Surgical procedures
 Chapter 13. Temporary restorations
 Chapter 14. Impression techniques
 Chapter 15. Jaw relation determination
 Chapter 16. General principles of crown and bridge restorations
 Chapter 17. Challenge: Restorations in the highly esthetic zone
 Chapter 18. Challenge: Fixed immediate loading of the edentulous jaw
 Chapter 19. Removable restorations
 Chapter 20. Occlusal concepts
 Chapter 21. Digital applications in implant prosthetics
 Chapter 22. Aftercare
 Chapter 23. Prosthetic complications
 Chapter 24. Implants and superstructures in bad times: mucositis and peri-implantitis

Part D. Restoration concepts
 Chapter 25. Single tooth gap within the esthetic zone
 Chapter 26. Interdental gap or free-end situation

Chapter 27. Severely reduced residual dentition
Chapter 28. Edentulous jaws
Part E. Dental workflows
Chapter 29. Fixed restorations on implants
Chapter 30. Fixed restorations on jaw-spanning implants
Chapter 31. Removable restorations on implants
