Informazioni sul libro

Autori: Qi Liu / Haidong Zhang / Jingwen Yang / Xia Yan / Chao Suo

Titolo: Periodontal Surgery for Root Coverage

Sottotitolo: A step-by-step guide

Testo breve:

This well-illustrated atlas focuses on advanced surgical techniques for restoring soft tissue defects around natural teeth caused by varying degrees of gingival recession. Following a discussion of the biologic basis and rationale for increasing soft tissue volume, the authors review the development and mechanisms of root coverage. They provide step-by-step instructions for the prevailing techniques of root coverage therapy for a successful pink esthetic treatment outcome. Clinical cases demonstrate the techniques, outlining evidence-based principles and clinical considerations in a clear and easy-to-follow manner. For those who want to learn to predictably treat gingival recession, this book is an excellent aid.

Contents

Chapter 1. Biologic principles of periodontal tissues
Chapter 2. Basic concepts of gingival recession and root coverage
Chapter 3. Instruments for root coverage surgery
Chapter 4. Presurgical preparation and postsurgical maintenance
Chapter 5. Free gingival graft and subepithelial connective tissue graft
Chapter 6. Coronally advanced flaps with subepithelial connective tissue graft: a classic protocol for root coverage
Chapter 7. Tunnel technique with subepithelial connective tissue graft for root coverage
Chapter 8. Two-stage technique

Argomenti: Chirurgia orale e maxillo-facciale, Chirurgia orale, Parodontologia, Odontoiatria generale
