Kurztext:

Two well-known and dedicated practitioners pool their experience and appreciable skill into this illustrated step-by-step reference book on periorbital and eyelid surgery. Drawing from a wealth of surgical expertise and rigorous study, the authors' particular knowledge of the periorbital area shines through in their emphasis on exact anatomical comprehension of the patient's physiology. Through detailed descriptions of particular surgical cases and common errors or misconceptions, as well suggestions and advice for the improvement of operating techniques on a patient-to-patient basis, this book presents itself as a complete, comprehensive reference work for novice surgeons and experienced practitioners alike.
