

EJOI is on PubMed!

I am very pleased to announce that *EJOI* finally gained more visibility thanks to its presence on PubMed (MEDLINE) so now a much larger audience can browse its abstracts online. Our next goal is to have an impact factor, though I think it will take some more time before getting it and initially it will not be particularly impressive (below statistical significance), but it will grow rapidly over the next years.

In this issue there is a review update and a new trial on the efficacy of antibiotic prophylaxis

for implant placement, providing additional information to clinicians interested in making informed decisions. The final decision on what to do is always in the hands of the operators, however the mission of *EJOI* is to provide dentists and patients the most reliable information on which to base their decisions.
