Buch-Information

Autoren: Katrin Bekes

Titel: Molar Incisor Hypomineralization

Kurztext:

Molar incisor hypomineralization (MIH) has become a much-discussed topic of interest that presents major challenges for dental professionals in practice and research. It is defined as a qualitative enamel defect that typically occurs on one or more first permanent molars with or without the involvement of the permanent incisors. This book serves as a comprehensive reference that critically appraises the controversies around MIH found in the scientific literature. Practical advice about diagnosis and treatment of the disease is provided, and the various clinical treatment options are explained in detail. The text is written for dental practitioners, postgraduate and undergraduate students and researchers, as well as anyone who would like to expand their knowledge of this contemporary topic in everyday clinical dentistry.

Contents

- Chapter 01. Introduction
- Chapter 02. Clinical presentation and morphological features
- Chapter 03. Structural properties of hypomineralized enamel
- Chapter 04. Prevalence
- Chapter 05. Etiology
- Chapter 06. Diagnostics and classification options
- Chapter 07. Differential diagnoses
- Chapter 08. Therapy concepts
- Chapter 09. Pain management
- Chapter 10. Prophylaxis and desensitization
- Chapter 11. Fissure sealing
- Chapter 12. Direct restorations
- Chapter 13. Indirect restorations
- Chapter 14. Extraction
- Chapter 15. Treatment options for hypomineralized incisors
- Chapter 16. MIH and caries
- Chapter 17. Hypomineralized primary molars
