Información sobre el libro

Autores: Akiyoshi Funato / Tomohiro Ishikawa
Título: 4D Implant Therapy
Subtítulo: Esthetic Considerations for Soft Tissue Management
Texto breve:

The authors of this book assert that for optimal esthetics and patient satisfaction, a fourth dimension—timing—must be given equal weight in implant treatment planning. The aim of this book is to introduce this new 4D concept for esthetic implant therapy and to reexamine the traditional treatment sequence of implant therapy so that practitioners and patients can achieve predictable and esthetically pleasing treatment outcomes. The importance of including patients and their individual needs and goals in treatment planning is emphasized, as is the preservation of alveolar bone, dentition, function, and esthetics over the long term through the proper execution of periodontal treatment. Topics include immediate implant placement in extraction sockets, extraction socket preservation, root submergence techniques, ridge augmentation, and soft tissue management in the esthetic region.

Contents

Chapter 1. 4D Concept and Strategy
Chapter 2. 3D Implant Placement
Chapter 3. Immediate Implant Placement in the Extraction Sockets in the Esthetic Region
Chapter 4. Extraction Socket Preservation and Root Submergence in the Esthetic Region
Chapter 5. Ridge Augmentation
Chapter 6. Peri-Implant Soft Tissue Management in the Esthetic Region
Chapter 7. Treatment Planning for Single- and Multiple-Tooth Implant Cases
Chapter 8. 4D Concept Technique Guide

Categorías: Implantología, Periodoncia
