Book information

Authors: Katrin Bekes

Title: Molaren-Inzisiven-Hypomineralisation

Short text:

Molar incisor hypomineralization (MIH) has become a highly topical issue that poses major clinical challenges to dental professionals worldwide. This book is a comprehensive reference work which, on the one hand, reviews the various aspects such as appearance, etiological factors, diagnosis, and classification of MIH based on the professional literature and, on the other hand, provides practical tips on how to deal with it and explains the procedures of the various treatment options. The book is aimed at interested dental colleagues, postgraduates, and students, as well as anyone who would like to expand their knowledge of this explosive topic in the everyday clinical practice of dentistry.

Categories: General Dentistry, Pediatric Dentistry, Student literature
