Información sobre el libro

Autores: Peer W. Kämmerer / Diana Heimes

Título: Schmerzkontrolle in der Zahnmedizin

Subtítulo: Controlling pain in dentistry: Local anesthesia, analgesia, sedation

Texto breve:

Patients decide on the basis of pain-free treatment whether they will come back to a practice or recommend it to others. Pain control is therefore a marketing tool and is still the "business card" of every dental practice. The authors of this book aim to provide assistance for individual and safe pain-free dental treatment, taking into account the increasing number of high-risk patients. They provide a comprehensive and up-to-date overview of the basics of anatomy, physiology, and pharmacology; the medical history; and the various options for pain management as well as the accompanying dental medication. The book concludes with a discussion of possible complications. Each chapter ends with questions that check the reader's knowledge, which are answered in the Appendix.

Contents

- Chapter 1. Anatomy
- Chapter 2. Physiology of pain
- Chapter 3. Chemistry and pharmacology of local anesthetics
- Chapter 4. Anamnesis and individualized local anesthesia
- Chapter 5. Instruments and techniques of dental local anesthesia
- Chapter 6. Systemic analgesia as a pillar of analgesia
- Chapter 7. Oral sedation and sedation with nitrous oxide
- Chapter 8. Intravenous sedation by dentists
- Chapter 9. Potential complications of local dental anesthesia
- Appendix: Answers to learning check questions in Chapters 1 to 9

Categorías: Odontología en general, Cirugía oral
