## Book information

**Authors:** Federico Hernández Alfaro  
**Title:** Bone Grafting in Oral Implantology  
**Subtitle:** Techniques and Clinical Applications

**Short text:**

Bone reconstruction of defects resulting from atrophy, injury, congenital malformations, or neoplasms has become a routine part of dental rehabilitation procedures, but it requires sound knowledge of bone repair processes and graft behavior. This book presents protocols for harvesting, preserving, and placing bone grafts that are based on the biology and general principles of bone grafting involving the symphysis, ascending ramus and body, coronoid process, maxillary tuberosity, sinus wall, zygomatic buttress, calvarium, iliac crest, and tibia.

**Contents**

Chapter 01. Biology of Bone Grafting  
Chapter 02. General Principles of Bone Grafting  
Chapter 03. Symphysis  
Chapter 04. Ascending Ramus and Body  
Chapter 05. Coronoid Process  
Chapter 06. Maxillary Tuberosity  
Chapter 07. Sinus Wall  
Chapter 08. Zygomatic Buttress  
Chapter 09. Calvarium  
Chapter 10. Iliac Crest  
Chapter 11. Tibia

**Contributors**

Carlos Arranz Obispo • María José Biosca • Eloy García Díez • Javier Giméno Medina • Carlos Martí Pagés

**Categories:** Implantology, Oral Surgery, Periodontics
