Title: Maxillofacial Rehabilitation

Subtitle: Surgical and Prosthodontic Management of Cancer-Related, Acquired, and Congenital Defects of the Head and Neck

Short text:

The rehabilitation of patients with disabilities of the head and neck secondary to acquired and congenital defects continues to be a challenge. Today it is possible to restore most patients to nearly normal form and function, enabling them to lead useful and productive lives. However, successful outcomes require close interaction among many health care disciplines. Given the recent advances in maxillofacial prosthetics and reconstructive surgery, the pace of change in the rehabilitation of oral and facial defects has been far too slow. For example, free tissue transfers have been used throughout the world for the last 20 years to restore bony defects of the mandible, but far too many surgeons fail to understand that it is equally important to restore the bulk and contour of the tongue if the oral functions of speech, mastication, and control of saliva are to be restored. This updated edition with an emphasis on a truly multidisciplinary approach provides the reader with insights into the latest developments in maxillofacial prosthetics, reconstructive surgery, and dental care. New chapters present information on digital technology and tissue engineering, and all chapters have undergone significant revision, reflecting the advances in the use of osseointegrated implants and free vascularized flaps. The reader will take away practical knowledge of state-of-the-art treatment approaches to ensure that patients of the future will no longer assert that "the cure was worse than the disease."

Contents

- Chapter 01. Oral Management of Patients Treated with Radiation Therapy and/or Chemoradiation
- Chapter 02. Rehabilitation of Tongue and Mandibular Defects
- Chapter 03. Rehabilitation of Maxillary Defects
- Chapter 04. Rehabilitation of Soft Palate Defects
- Chapter 05. Rehabilitation of Facial Defects
- Chapter 06. Rehabilitation of Cleft Lip and Palate and Other Craniofacial Anomalies
- Chapter 07. Digital Technology in Maxillofacial Rehabilitation
- Chapter 08. Tissue Engineering of Maxillofacial Tissues
- Chapter 09. Psychosocial Perspectives on the Care of Head and Neck Cancer Patients
- Chapter 10. Oral Management of Chemotherapy Patients
