Titel: Treatment Planning for Traumatized Teeth

Kurztext:

Since the publication of the first edition of this book, increased knowledge of treatment outcomes combined with better techniques, new materials, and innovative technology have led to improved diagnosis and management of dental traumatic injuries. This new edition emphasizes a minimally invasive approach to treating dental traumas in which procedures are aimed at assisting the natural healing process of the dental hard tissues, pulp, periodontal ligament, and alveolar bone; where possible, invasive restoration, pulpectomy, and extraction are avoided. As in the previous edition, key points related to examination and diagnosis, treatment planning, and treatment procedures are described for specific types of dental trauma, and long-term follow-up is encouraged. New cases and updated protocols elucidate the most recent approaches to effective treatment of dental traumatic injuries, and the use of dental cone beam computed tomography, which has dramatically improved diagnosis for traumatized teeth, is emphasized throughout.

Contents

Chapter 01. Anatomical Considerations and Classification of Dental Trauma
 Chapter 02. Examination and Diagnosis of Traumatic Dental Injuries
 Chapter 03. Crown Fracture
 Chapter 04. Crown-Root Fracture
 Chapter 05. Root Fracture
 Chapter 06. Subluxation
 Chapter 07. Extrusive Luxation
 Chapter 08. Lateral Luxation
 Chapter 09. Intrusive Luxation
 Chapter 10. Transient Apical Breakdown
 Chapter 11. Avulsion
 Chapter 12. Trauma to the Primary Dentition
 Chapter 13. Trauma to the Supporting Structures

Fachgebiet(e): Endodontie, Fachübergreifend, Kinderzahnheilkunde, Restaurative Zahnheilkunde, Zahnheilkunde allgemein
