Book information

Authors: Matthias Kern
Title: Resin-Bonded Fixed Dental Prostheses
Subtitle: Minimally invasive - esthetic - reliable
Short text:

Nowadays single-retainer metal-ceramic and all-ceramic resin-bonded fixed dental prostheses (RBFDPs) often present a minimally invasive alternative to single-tooth implants or other conventional prosthetic methods. With a growing body of evidence showing that implants placed in the esthetic zone of younger patients present a high risk of esthetic problems in later years, RBFDPs made from zirconia ceramics are experiencing a great renaissance. This book details the protocols necessary to achieve success when replacing incisors with single-retainer RBFDPs. Although the method is technically sensitive, it is simple and extremely reliable when the correct procedures are implemented. The principles outlined in the text can also be used to replace canines and premolars. Numerous high-quality figures detail the procedures for metal-ceramic and all-ceramic RBFDPs, and case presentations—some with 20 years and more of follow-up—document the development of the success model for RBFDPs. This comprehensive text will benefit practitioners who want to expand their minimally invasive treatment options for esthetic single-tooth replacement.

Contents

Chapter 01. Why RBFDPs evolved to a single-retainer design
 Chapter 02. When single-retainer RBFDPs are useful
 Chapter 03. When single-retainer RBFDPs (alone) are not useful
 Chapter 04. Excellent longevity of single-retainer RBFDPs
 Chapter 05. Advantages and disadvantages of single-retainer RBFDPs
 Chapter 06. When RBFDPs should bond long term
 Chapter 07. Adequate diagnosis and treatment planning are essential
 Chapter 08. Pretreatment is of utmost importance
 Chapter 09. Metal-ceramic RBFDPs—concise
 Chapter 10. All-ceramic RBFDPs—detailed
 Chapter 11. To splint or not to splint—that is the question
 Chapter 12. Replacement of canines and premolars
 Chapter 13. Aftercare: prevent problems—solve problems
 Chapter 14. What you have to do to make it go wrong—the 10 most common mistakes in the application of RBFDPs
 Chapter 15. Appendix

Categories: Prosthodontics, General Dentistry
