Buch-Information

Autoren: Tomas Linkevicius
Titel: Zero Bone Loss Concepts
Kurztext:

Bone loss is still a major issue that dentists encounter, but it is a complication that can be prevented. By combining clinical experience with peer-reviewed scientific evidence, the author of this book has put together a guide that any implant specialist will find invaluable to prevent bone loss in their patients. Different strategies are presented that can be used to achieve zero bone loss years after treatment. Because successful treatment depends on both the surgical and prosthetic components, the book is divided into two parts, each focusing in depth on what must be done in each phase to promote bone stability. Case presentations detail many types of clinical situations, implant choices, and prosthetic solutions, all backed by evidence-based clinical studies that have proven success.

Contents

Section I. Surgical Concepts
 Chapter 01. Surgical Factors for Establishing Crestal Bone Stability
 Chapter 02. Implant Design Factors
 Chapter 03. Implant Placement Depth
 Chapter 04. Vertical Soft Tissue Thickness
 Chapter 05. Subcrestal Implant Placement
 Chapter 06. Flattening of the Alveolar Ridge
 Chapter 07. The Tent-Pole Technique
 Chapter 08. Vertical Soft Tissue Augmentation
 Chapter 09. Attached Tissues Around Dental Implants
 Chapter 10. Practical Recommendations for Implant Placement

Section II. Prosthetic Concepts
 Chapter 11. Prosthetic Factors for Maintaining Crestal Bone Stability
 Chapter 12. Considerations for Cement-Retained Restorations
 Chapter 13. Cement/Screw-Retained Restorations
 Chapter 14. Titanium Base Solutions for Fixed Partial Dentures
 Chapter 15. Abutment Alternatives
 Chapter 16. Influence of the Emergence Profile
 Chapter 17. Prosthetic Materials
 Chapter 18. Subgingival Materials
 Chapter 19. Avoiding "Zirconia Without Zirconia" Restorations
 Chapter 20. Supragingival Materials for Implant Reconstructions

Fachgebiet(e): Implantologie, Oralchirurgie
